New Series 94 Output Design

Please note: Effective immediately Asahi/America has made a change to our output on the Series 94, making it a true ISO output. This change does not affect the F05 bolt pattern or the 6mm thread size, but affects the output shaft itself. Previously, the output shaft was a .20mm square that was offset 45 degrees. Now, the output shaft is a 14mm star drive. We are shipping these actuators NOW.
