**Re:** Release of CPVC Type-57P Butterfly Valve

---

Effective immediately, Asahi/America, Inc. introduces the CPVC body and disc Type-57P butterfly valve. This is a new material for Asahi/America's Type-57, which features a durable injection molded gray color CPVC body and disc with EPDM or FKM seat and seals, and 316 stainless steel non-wetted stem. A redesigned, high visibility throttle positioning plate has been added, which features an opening degree legend in 10° increments, making accurate throttle positioning between 0° closed and 90° open possible. For high cycle life and smooth torque, seat/disc bushings have been fitted with dual O-ring seals. Additionally, two molded tag holes are positioned in the valve body for user-defined valve identification purposes. The CPVC Type-57P is available now in ANSI wafer style connection, sizes 2", 3", 4", 6" and 8" in both lever and Plasgear™ operator. Additionally, the CPVC Type-57P can be actuated both electrically and pneumatically. Various manual accessories can be installed, as well.

**Specification:**

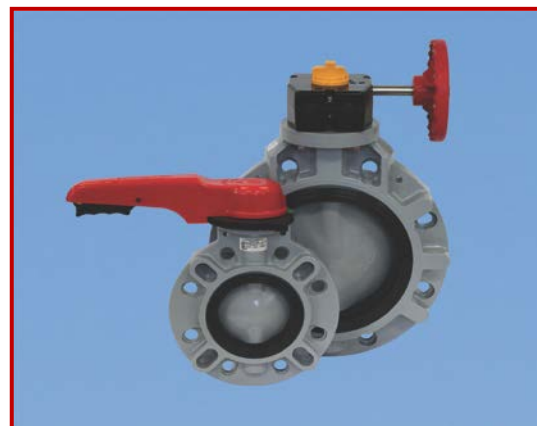

- Products: CPVC Type-57P Butterfly Valve
- Sizes/Models: 2", 3", 4", 6", & 8" Wafer style with Lever or Plasgear™ operator
- Materials: CPVC body and disc, EPDM or FKM seat and Seals

**Interchangeability:**

- The CPVC Type-57P shares the same face to face dimension as all like size Type-57 butterfly valves

**Availability:**

- Valve Materials are in stock, ready to be assembled, tested and shipped to order.
